Abstract:
The health manifesto highlighted that studies on innovation flourish when all sides of the knowledge triangle (research, academia, and industry) work in tandem in terms of enhancing the quality of care. This opportunity should go much better than the implementation of theoretical and academic work in universities worldwide. To respond to this, health innovation is currently being developed by experts in higher education. Therefore, this preface coming from two experts in the field encourages how important to publish studies on innovation in health for reducing the health problems along with issues on healthcare services in clinical or community practice.

Keywords: Innovation; healthcare system; quality of care; clinical practice; community care

Dr. Muji Setiyo, S.T., M.T
Director of Center of Research and Community Empowerment (LPPM), Universitas Muhammadiyah Magelang, Indonesia

We are now extending the opportunity to a group of people, regardless of background, for life-long learning, to ensure that we are ready to navigate and address the ever-changing needs of health. A quote from Nelson Mandela emphasizes that “Education is the most powerful weapon you can use to change the world”. This can be an encouragement for health researchers to publish powerful studies that may change the healthcare system worldwide. During the times, education is fundamental for health innovation to develop studies. Students, lecturers, government, and industry should collaborate on this opportunity. Innovation in health for society which is an international journal will support to translate the knowledge and theory into applicable studies.

Dr. Heni Setyowati Esti Rahayu, S.Kp., M.Kes

Universities as academic centers are a renewable source of skilled and motivated researcher training in various disciplines including in health science. In the coming years, the local and national executive health boards should work with a healthcare professional to assess the clinical and community health issues. Finding the problem-centered point allows to design and development strategies to focus on the clinical needs. Moreover, a collaborative team in healthcare will pivot different solutions from a different perspective what will be more effective. Innovation in health for society is ready to help the researcher to reach their dream in terms of publishing the paper on innovation in health.
